THE ULTIMATE LENS PACKAGE
BY ESSILOR

The Best in Vision, Clarity, and Protection

Our most advanced lens technologies together in a single lens. Designed for both presbyopic and single vision patients.
INNOVATION IS OUR VISION

The best visual experience for presbyopic patients.

ULTIMATE LENS PACKAGE: PROGRESSIVE

- Extends the area of sharp vision within arm’s reach, so patients enjoy sharp vision at every distance without compromise.
- Reduces reflections on the lens from all directions for less distracting glare, improved aesthetics, enhanced UV protection, and safer nighttime driving in a clear lens.
- Adapts to light inside and outside for comfortable vision, and helps protect from UV rays and Harmful Blue Light.*

At Essilor, we are driven by our mission to improve lives by improving sight. For nearly 170 years, Essilor has been pushing the boundaries of what is possible in ophthalmic lens technology.

At Essilor, we are driven by our mission to improve lives by improving sight. For nearly 170 years, Essilor has been pushing the boundaries of what is possible in ophthalmic lens technology.

But simply innovating isn’t enough. That’s why we’ve brought together the best of our lens technologies to create the Ultimate Lens Package—designed to deliver the ultimate in vision, clarity, and protection for every patient in a single lens.

ULTIMATE LENS PACKAGE: SINGLE VISION

The best visual experience for single vision patients.

- Eyezen+ defends against eye strain from extended up-close viewing of digital devices, and reduces exposure to Harmful Blue Light.*
- Crizal Repel UV reduces reflections on the lens from all directions for less distracting glare, improved aesthetics, enhanced UV protection, and safer nighttime driving in a clear lens.
- Transitions Signature VII adapts to light inside and outside for comfortable vision, and helps protect from UV rays and Harmful Blue Light.*

*European and American Expressions of transparency at least 99% of harmful blue light occurs and Transitions Signature VII was tested over 95% of harmful blue light cut-off. Transitions enhanced blue light filter is either non-prescription (prescription lenses with Transitions Enhanced Blue Light filter were not tested). Transitions Enhanced Blue Light Filter was tested by means other than American Expressions of transparency.
STEP 1: IDENTIFY YOUR PATIENT’S NEEDS

Ask your patient some questions to help identify the correct lens solution.

- “Do you ever have to MOVE YOUR HEAD to see sharply through the lens?” or “What items within arm’s reach do you wish were EASIER TO SEE?”
- “How much time do you spend on DIGITAL DEVICES?”
- “What are you doing to protect your eyes from UV AND HARMFUL BLUE LIGHT?”

STEP 2: RECOMMEND THE SOLUTION

Recommend the ULTIMATE LENS PACKAGE as a complete single-lens solution—not as individual technologies or as add-ons—to help your patient understand how each component of the lens works together to improve their vision.

When presenting price to your patient, focus on cost savings. For example: “Normally your cost would be $XXX, but with your insurance/discount, you are only responsible for $XXX. That’s a savings of $XXX.”

SEE BACK COVER for a detailed breakdown of the benefits the Ultimate Lens Package offers to both presbyopic and single vision patients.

For more information on the ULTIMATE LENS PACKAGE and the technologies within it, visit EssilorUltimateLens.com.
**ULTIMATE LENS PACKAGE BENEFITS AT A GLANCE**

**PROGRESSIVE**

*Eyezen+, Varilux X Series, and Transitions Signature VII lenses block at least 20% of Harmful Blue Light indoors and Transitions Signature VII lenses block over 85% of Harmful Blue Light outdoors. Harmful Blue Light is the blue-violet high-energy wavelengths found between 415-455 nm on the light spectrum believed to be most toxic to retinal cells.*

Varilux® X Series™ Lenses Put Sharper Vision Within Arm’s Reach

Finally, a progressive lens that addresses the key visual challenges of today’s presbyopes. Thanks to new Xtend™ Technology, Varilux® X Series™ extends the area of sharp vision within arm’s reach, so patients no longer have to move their head to find “just the right spot.” Your patients will experience sharper vision—at every distance, without compromise.

WHAT IS XTEND™ TECHNOLOGY?

With other progressive lenses, wearers are only able to see 1 distance through any given point in the lens, but Varilux® X Series™ lenses allow the wearer to see multiple distances through any point in the near and intermediate zones. The result: significantly extended vision within arm’s reach.
VARILUX® X SERIES™ LENSES ARE THE RESULT OF:

- 5 years of research and development
- 19 wearer studies among thousands of wearers
- 15 new lens-design patents
- A new design-calculation engine powerful enough to process such an advanced progressive lens design

VARILUX® X SERIES™: BETTER THAN THE BEST

In 2012, Essilor revolutionized the industry with the launch of Varilux® S Series™ lenses—setting a new gold standard in progressive lenses. But now, thanks to new Xtend™ Technology, the best just got better:

7 OUT OF 10 CONSUMERS PREFER VARILUX X SERIES over Varilux S Series*

VARILUX® X SERIES™ IS AVAILABLE IN 3 OPTIONS:

- **VARILUX® X DESIGN™**
  Fit like any progressive lens (with PD and fitting height)

- **VARILUX® X FIT™**
  Incorporates position of wear measurements (pantoscopic tilt, vertex distance, wrap angle—defaults accepted)

- **VARILUX® X 4D™**
  Dispensed with the Visioffice® System

*2017 independent wearer study conducted by University of Arkansas, sponsored by Essilor of America, Inc. (N=52).
Crizal Sapphire® 360° UV Lenses Deliver Best-in-Class Transparency

Light is everywhere. Modern eyeglass wearers live in an increasingly illuminated world, surrounded by sources of light that strike their lenses from every angle imaginable. These light sources create reflections on lenses that are uncomfortable and can impact wearers’ everyday lives.

2 OUT OF 3 WEARERS agree they’re exposed to more light sources than ever before*

4 OUT OF 5 WEARERS experience reflection when inside or outside*

HOW ARE CRIZAL SAPPHIRE® 360° UV LENSES DIFFERENT?

• The first to feature Multi-Angular Technology™, which reduces reflections from any angle of light, resulting in less distracting glare, better aesthetics, and safer nighttime driving

• The first to feature optimal UV protection in a clear lens, without compromising clarity

*Quantitative consumer study, N=2406 wearers from 25 to 65 years old, United States, Spain, India - GfK (2016).
The best no-glare lens on the market

WITH CRIZAL SAPPHIRE® 360° UV LENSES, THE CHOICE IS CLEAR

• Multi-Angular Technology™ considers a 360° angle in the optical calculation. A new patent-pending nanolayer, when combined with this new calculation, results in reduced reflections by 35% to 45%,* for improved clarity and better aesthetics.

CONSUMERS PREFER LENSES WITH CRIZAL®

45% LESS SIDE REFLECTIONS

35% LESS FRONT REFLECTIONS

NEW NANOLAYER

*As compared to Crizal Avancé UV™, depending on the lens configuration (index, hard coat, etc) and incident angle.
†Independent eyeglass wearers study of 200 participants conducted by the University of Arkansas in 2016 and sponsored by Essilor of America, Inc.
‡Consumer study of 896 participants who purchased Crizal lenses in connection with a promotion that was conducted by Essilor (2016).
Transitions® Signature® VII lenses seamlessly adapt so patients can Live the Good Light™

TRANSITIONS® SIGNATURE® VII LENSES:

• Helps protect eyes from UV rays and Harmful Blue Light, both inside and outside*
• Are fully clear inside, and begin to darken as soon as you step outside
• Have the fastest fade-back speed of any Transitions® lenses

*Transitions Signature VII lenses block at least 20% of Harmful Blue Light indoors and over 85% of Harmful Blue Light outdoors. Harmful Blue Light is the blue-violet high-energy wavelengths found between 415-455 nm on the light spectrum believed to be most toxic to retinal cells.
WHY TRANSITIONS® SIGNATURE® VII ADAPTIVE LENSES?

Transitions® Signature® VII lenses use exclusive Chromea7™ technology, an advanced formulation that allows the lenses to be more responsive in more outdoor lighting conditions across all temperatures.

CHROMEA7™ TECHNOLOGY

This exclusive dye formulation allows the lenses to be more reactive to indirect sunlight and hot temperatures, so it’s darker when it matters most.

MORE RESPONSIVE

Especially reactive to indirect sunlight and hot temperatures, so it’s darker when patients need it to be

RIGHT SHADE

Enables the lenses to be fully clear indoors and darken to just the right tint, so the optimal amount of light reaches patients’ eyes

HELPS PROTECT

Blocks 100% of UV rays, and helps reduce exposure to Harmful Blue Light emitted by the sun, electronic devices, and screens*

*Transitions Signature VII lenses block at least 20% of Harmful Blue Light indoors and over 85% of Harmful Blue Light outdoors. Harmful Blue Light is the blue-violet high-energy wavelengths found between 415-455 nm on the light spectrum believed to be most toxic to retinal cells.
Eyezen™+ Lenses Defend Against Digital Eye Strain and Harmful Blue Light*

Today’s digital world forces our eyes to work harder every day. Single vision patients need a better solution that can keep up with the modern demands of life and the impact they have on their eyes.

HOW DO EYEZEN™+ LENSES ENHANCE THE SINGLE VISION EXPERIENCE?

- Utilizes Essilor’s Smart Blue Filter™ feature, which reduces exposure to Harmful Blue Light by at least 20%*
- Designed with W.A.V.E. (Wavefront Advanced Vision Enhancement™) Technology to provide sharper vision than traditional single vision lenses
- Available with 4 different levels of accommodative relief for single vision patients in every age group†:

<table>

*A 2016 double-blind, home-use test conducted by the University of Arkansas with 121 participants, including 40 single vision eyeglass wearers, revealed that 3 out of 4 prescription eyeglass wearers preferred lenses with Eyezen design 1, 2, or 3 to their own eyeglasses, and it also showed that 4 out of 5 prescription eyeglass wearers preferred lenses with Eyezen design 1, 2, or 3 to their own eyeglasses when using digital devices.

†Eyezen+ lenses block at least 20% of Harmful Blue Light indoors. Harmful Blue Light is the blue-violet high-energy wavelengths found between 415-455 nm on the light spectrum believed to be most toxic to retinal cells.
